

## Mercury Fleetmanagement (MPS) "TOP NEWS"

- Forecast time range of consumables

Up to now the Mercury Fleet & Servicemanagement software has been able by using freely definable Toner thresholds, to warn early before supplies of the monitored printers are running low and need to be replaced. This results in automated notifications to downstream service processes as only one of the versatile capabilities of the Mercury Fleet & Servicemanagement system.

As of now, the software can also generate forecasts for the range of supplies and present them in a separate graphical report. Based on the manufacturer information about coverage, stored in the MPS software, and the printing systems reported values for fill levels and change intervals, forecasts for page ranges, daily range and date of the next renewal of consumables are calculated and colour co-ordinated presented for each monitored consumable.

Thus, the possibilities in managing printer supplies with the MPS software will be significantly expanded.
