

## New: docuFORM Mercury VX Launch

Absolute print data security through end "2" end encryption

The launch of the docuFORM Mercury VX (version 10) will take place in time for the coming into effect of the new European Data Protection Regulation GDPR.

In addition to the encryption of personalized data, Mercury VX now also encrypts and transmits all print data itself, from creation to output, encoded in the network, and finally decodes and outputs it in the printing system itself.

By using the IPPS transmission protocol, docuFORM Mercury dispenses with any hardware additions, including the output device, thereby offering true end "2" end encryption. Mercury VX can work independently with individual encryption certificates. Indeed, the entire system can also be fully integrated into a company's certificate policy.

As part of the manufacturer-independent follow "2" print solution, Mercury VX guarantees end-to-end encryption of all print data. If the user opts for an encrypted print, this is also carried out seamlessly. The user is prompted to output to a corresponding IPPS-capable device. If they authenticate themselves on an encryption-free device, the print data remains secure and cannot be output on it, thus ensuring consistent encryption and data security.

Of course, the same functionality is also guaranteed when using the Mercury Global Printer Driver (GPD). End "2" end encryption is guaranteed at all times both for direct printing, as well as within the GPD follow "2" print workflow. The user can enjoy the seamless ease of use of the Mercury GPD, whereby the encryption option of individual devices is visually and interactively offered to them.

All Mercury field installations can be updated with Mercury VX. In addition, the newly developed IPPS transfer module is required for end "2" end encryption. The certificate management complies with Microsoft specifications and can be individually configured within the scope of the respective installation.

**ALL INCLUSIVE DOCUMENT & OUTPUT MANAGEMENT SYSTEM  
END-TO-END ENCRYPTION - AIRPRINT & EMBEDDED PRINTER APPS ACROSS ALL MANUFACTURER**

**SAP Certified**  
Integration with SAP NetWeaver
