# docuFORM launches embedded apps for Hewlett Packard MFPs

**Mercury Suite: Comprehensive Document & Output Management System**

As an important further component for the manufacturer independent and comprehensive Mercury DMS / OMS Suite, the embedded apps are now also available for HP MFPs.
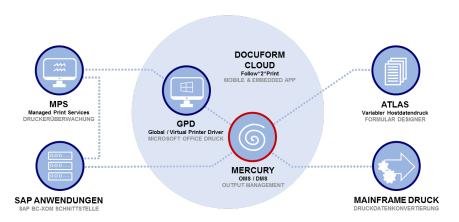

As part of this worldwide collaboration with HP, docuFORM has now fully integrated HP Printing Systems into its Mercury Suite in addition to the SDS program for ‚service prediction'.
The app has a fully integrated pull print solution, which can be used in conjunction with classic printer drivers, as well as with the Europe-wide patented docuFORM Global Printer Driver (GPD). For additional cost center and utilization billing, the app data can be transferred to the docuFORM MPS solution.

Martin Denk Dipl. Ing. (TU) Managing Director and owner of docuFORM GmbH: It is of utmost importance for our multi-vendor solution, to have fully integrated now also the HP products into the Mercury Suite. Since we already support all significant printer manufacturers with embedded apps, we are performing a very important step in completing our Follow „2" print solution.

Well-known companies like Daimler AG, Beiersdorf, Federal Employment Agency, the Charité or Compass Group are using the Mercury Pull Print solution from docuFORM globally and successfully worldwide.

**Mercury** Suite & Global Printer Driver

**Umfassendes Document & Output Management System**
**Wartungsfrei & selbstlernend – Verzicht auf jegliche klassische Druckertreiber**
