## Germany's largest Federal Ministry opts for Mercury across the board!

**Federal Employment Agency relies on docuFORM solutions after one-year tender process**

**Bundesagentur für Arbeit**

We are pleased to inform you today that the largest German Federal Ministry has decided to use Mercury nationwide.

Once again, the main characteristics of our product Mercury, namely manufacturer independence and the highest possible investment protection, as well as the motto „everything from one source“, contributed to this positive decision.

This decision matured in an almost one-year tender process in which intensive technical tests and comparisons were also carried out. In concrete terms, the Mercury modules SAP Print, Follow „2“, Print and Monitoring (MPS) for the entire printer fleet are used. In the appendix you will find the system structure of the customer. The overall rollout will take place in early summer 2015.

After Daimler AG, the Computer Compass Group and many other well-known companies, Germany's largest federal authority has now also opted for the print management middleware solution Mercury and Mercury MPS from docuFORM.

The continuously growing user community of Mercury pleases us and ultimately benefits the product and each individual user. Therefore, we are currently also planning so-called „Mercury User Days“.
