Mercury GPD now with individual watermark option

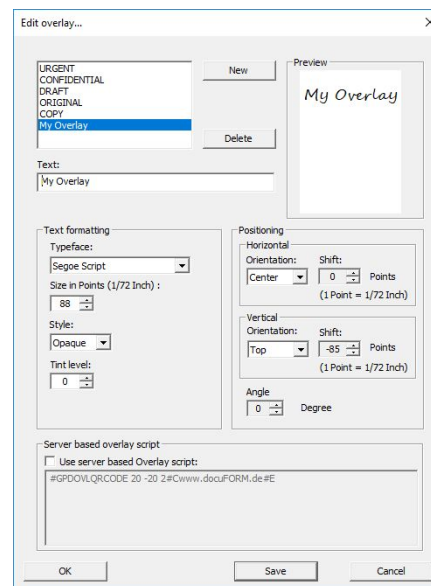

docuFORM Global Printer Driver (GPD) now with individual watermark option for classification and protection of digital documents by creator

As part of a release update of the docuFORM Global Printer Driver (GPD) to version 3.2.0, a comprehensive watermark option is available to the user, who can freely define up to 15 different watermarks for himself and superimpose them on his documents. This important overlay functionality extends the GPD analogously to previous classic printer drivers. In addition, script-controlled overlays for page backgrounds, barcodes, page numbers or other customer-specific imprints can be centrally defined and applied to any document.

Further functions are: Automatic positioning of watermarks at all side edges. Sizes, position and text angle can be adjusted manually. All Outline bassiereden Windows fonts can be used. Texts can be filled, outlined or opaque. The individual watermark / overlay functionality is a useful extension for the digital document workflow. Your own documents can be classified by the author, but can also be protected against misuse. Supported by the Global Printer Driver (GPD) from docuFORM, these functionalities can be used independently and across manufacturers as always.
